

# DSL Internet

## Can I make my DSL connection wireless?

Yes, you will be able to make your DSL connection wireless. You will need to purchase a wireless router in order to create a wireless network in your home or business.

Your wireless router will also need to be configured to work with our connection with either a username or password, or IP address settings (contact us to determine which is applicable in your case).

## Which wireless router should I buy?

While most wireless routers are compatible with our service, we cannot make recommendations on which router you should buy.

Consider speaking with a sales representative at your local electronics store to determine which wireless router will work for you.

## Do you offer support for wireless routers?

We do not. You will need to contact the wireless router manufacturer for any assistance in setting up or troubleshooting the wireless router.
