Email

How do I set up my email on my iPhone/iPad?

To set up your email on your iPhone, you need to follow these steps:

1. Open the Settings app.
2. Navigate to Mail, Contacts, Calendars.
3. Select Add Account.
4. Choose Other.
5. Choose Add Mail Account.
6. Fill in your name, email address, email password, and your email address again in the Description section.
7. On the next page, you will need to use the following server addresses:

Incoming mail server: imail.meganet.net
Outgoing mail server: imail.meganet.net

You may select either POP or IMAP for the mail account. [What's the difference?](#)

You will also need to make sure that SSL is OFF and that your username and password is filled in for both the incoming and outgoing section (despite the fact it may say it is optional).

If your iPhone shows and error declaring it is unable to connect with SSL, you may allow it to connect without SSL.

Your account should now be set up.
